

Using Predictive Maintenance Management to improve operational efficiencies and reduce costs

A webinar hosted by
The PRIMUS Zura Labs Group

June 22, 2023
10:30 AM to 11:30 AM CDT

Predictive Data Maintenance (PdM) is an advanced maintenance strategy that uses data analytics and data science to identify potential problems before they occur. This proactive approach allows for faster response times, better asset performance and lower overall costs associated with unexpected downtime or equipment failure. Artificial Intelligence (AI) driven PdM also provides long-term insights into the health of assets, making it a valuable tool for ongoing optimization.

In this webinar, we will discuss the benefits of implementing Predictive Maintenance and explore best practices for implementing predictive data analytics strategies and AI technology in maintenance management processes to optimize operations.

By joining this webinar, you will:

- Gain a better understanding of the importance of PdM
- Learn how to utilize data analytics and AI technology to increase efficiency, improve asset performance, and reduce maintenance costs
- Be provided with a comprehensive overview of the benefits of PdM and best practices for implementing it in your organization
- How to leverage your current technology stack and data sources to implement a better decision support system that incorporates both descriptive and predictive analytics

We will look at how PdM can help increase efficiency, reduce production costs and improve customer satisfaction by providing timely feedback on asset performance. Additionally, we'll discuss how PdM can help businesses take proactive steps to reduce the risk of equipment failure and downtime.

Join us for this informative one-hour webinar to explore the opportunities available through a “best-in-class” implementation of a PdM platform that leverages your existing data and software applications.

We look forward to welcoming you to this informative webinar. Early registration is recommended as space is limited in order to accommodate for questions and discussion.
